**Creators of  
Specifier as used  
by Siemens and  
the highly effective  
web based  
data gatherer**

**Karus™** excels at providing custom software development to meet business requirements.

Our focus is on creating software that enables a company to make more money while spending less. We are good at identifying the needs of businesses and determining areas for the best return on investment.

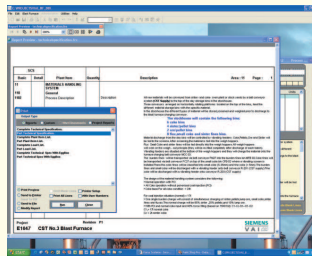

We achieve these results through careful analysis of what a company needs whilst eliminating elements that are unlikely to have an acceptable return on investment.

Lifetime technical support provided for all products.

Our software development services are provided by a specialist team of highly qualified software developers.

We have developed software applications written in Visual Basic, Visual FoxPro, C# and ASP.NET with databases such as SQL Server, Access and FoxPro.

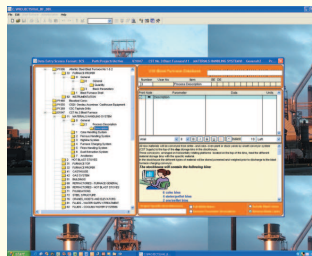

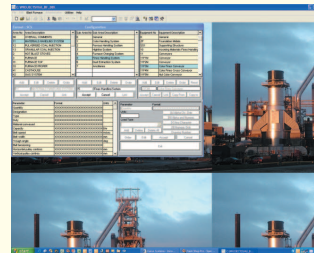

**Providing high quality software**

Rapid production of high quality documents in:-

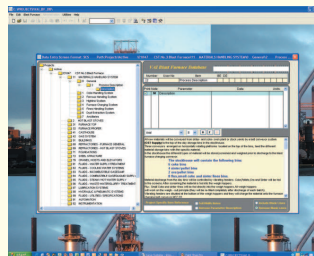

- Excel
- Word
- PDF
- Plain Text formats

Easily configured quotation templates save you time and money - retrieve quotations via search engine for immediate reuse.

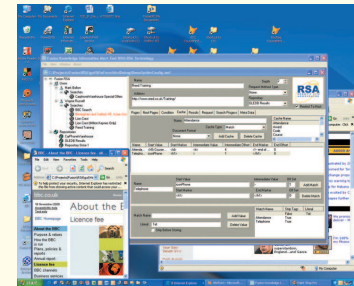

Track all data modifications and identify which user made the changes by date and time stamp.

Drag and Drop entry of data and images eliminates user error, increases productivity and ensures consistency of documentation.

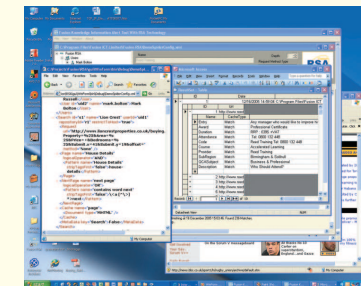

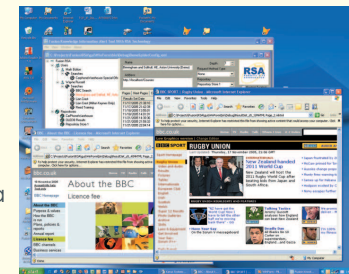

Other products - web data gatherer

- Configure the web data gatherer to collect information specific to you.
- Saves you time and cost!

- Web based tool eliminates the need for a local database connection.
- User controlled automated data collection at predetermined intervals.
